Overview of various plugins, each accompanied by a brief description and a link to its respective GitHub repository. These plugins offer a range of features and enhancements. By following the provided links, you can explore the source code and contribute to development.

ERA

The repository is an extension for the Heroes of Might and Magic 3.5 engine, commonly known as "In The Wake of Gods" (WoG). This project enhances the original game by introducing new features, modifications, and scripting capabilities, allowing for a more customizable and enriched gaming experience. Era is developed primarily in Pascal using Delphi 7.

VFS

The repository provides a Virtual File System (VFS) solution designed to simplify the integration of mod directories into projects. With just two lines of code, developers can virtually merge the contents of any directory into another, facilitating seamless mod support. VFS is developed primarily in Pascal using Delphi 7.

ERA-MODERN

The repository contain ports of the ERA and VFS components from Delphi 7 to modern versions of Delphi. The primary goal is to ensure compatibility with contemporary Delphi environments while making minimal code changes to preserve the original functionality. The repository includes the ERA and VFS projects along with the B2 library. For those interested in using the compiled releases, the repository provides self-extracting packages that can be unpacked directly into the game folder, replacing existing files.
